## Registration of Turkish imports of hot-rolled flat steel welcomed by EUROFER

### Key messages

- EUROFER has welcomed the start of registration of Turkish hot-rolled steel imports.
- The registration helps avoid opportunistic import surges ahead of the imposition of later duties.
- Registration is, thus, a critical tool to ensure the effectiveness of EU trade defence instruments.

### Main body of press release

**Brussels, 16 November 2020 – The European Steel Association (EUROFER) has welcomed the start of the registration of Turkish hot-rolled steel imports. This could potentially lead to the retroactive application of anti-dumping duties that are normally scheduled for January 2021.**

Given the rules laid down in the basic trade defence regulation, the registration of imports is a condition for retroactive application of anti-dumping of possible provisional duties in January. The registration helps avoid opportunistic import surges ahead of the imposition of later duties. Practically, any imports entering the EU from Turkey as of 14 November 2020 could be subject to anti-dumping duties in the future.

“Anti-dumping procedures are slow and time-consuming to deploy”, said Axel Eggert, Director General of EUROFER. “While the fourteen-month long investigation is ongoing imports will remain volatile and can quickly disrupt the EU market. Registration is, thus, a critical tool to ensure the effectiveness of EU trade defence instruments.”

The request for registration was submitted by EUROFER in September 2020, following an anti-dumping complaint submitted in May 2020. This anti-dumping case should yield conclusions in January 2021.

### About the European Steel Association (EUROFER)

EUROFER AISBL is located in Brussels and was founded in 1976. It represents the entirety of steel production in the European Union. EUROFER members are steel companies and national steel federations throughout the EU. The major steel companies and national steel federations in Switzerland and Turkey are associate members.

The European Steel Association is recorded in the EU transparency register: 93038071152-83.

### About the European steel industry

The European steel industry is a world leader in innovation and environmental sustainability. It has a turnover of around €170 billion and directly employs 330,000 highly-skilled people, producing on average 160 million tonnes of steel per year. More than 500 steel production sites across 22 EU Member States provide direct and indirect employment to millions more European citizens. Closely integrated with Europe's manufacturing and construction industries, steel is the backbone for development, growth and employment in Europe.

Steel is the most versatile industrial material in the world. The thousands of different grades and types of steel developed by the industry make the modern world possible. Steel is 100% recyclable and therefore is a fundamental part of the circular economy. As a basic engineering material, steel is also an essential factor in the development and deployment of innovative, CO2-mitigating technologies, improving resource efficiency and fostering sustainable development in Europe.
